

What is the difference between SAMs and CME credit?

SAMs is an ABP term for one form of CME category 1 credit. Not all CME credits are eligible for SAMs. SAMs differ in that they require a specified performance on a post-test. The ABP requires completion of 70 Category 1 CME credits per 2-year reporting cycle with at least 20 of these being SAMs. You may obtain more than 20 SAMs and less CME credits, as long as the total of SAMs and CME credits over a 2-year reporting cycle is 70.
